

# Self Introduction

My name is G Lokesh, which means "Lord of the World," symbolizing leadership and strength, qualities I strive to embody. I am currently pursuing my B.Tech in Computer Science at Prasad V. Potluri Siddhartha Institute of Technology. Throughout my journey, I have developed a deep passion for web development and a growing interest in emerging technologies.

My education has not only strengthened my technical skills but also imparted important non-technical lessons. Collaborating on group activities and working closely with peers has helped me enhance my communication skills and taught me the significance of teamwork. Serving on the student council further developed my leadership skills, teaching me responsibility and decision-making under pressure. Additionally, participating in sports, especially volleyball, has instilled in me perseverance and the ability to handle pressure in a composed manner.

Two strengths I value in myself are problem-solving and adaptability. I have encountered various challenges throughout my journey, but my ability to approach problems with a solution-oriented mindset has always been crucial. Whether it's learning new concepts quickly or adjusting to unexpected changes, adaptability has allowed me to grow both personally and professionally.

However, I recognize that overcommitting is a weakness I've dealt with. There have been instances where I took on too many responsibilities at once, which affected my productivity. Over time, I have made conscious efforts to prioritize tasks and manage my workload more efficiently, helping me stay focused on what matters most.

When it comes to my personality, I describe myself as a determined individual, always striving to achieve my goals. However, my perfectionist nature can sometimes lead me to over-focus on small details, which occasionally slows down progress. I am learning to find a balance between these traits to work more efficiently.

Aside from academics, I've been actively involved in extracurricular activities, particularly in sports, where I earned second place in a volleyball tournament. These experiences have taught me the value of teamwork and effective time management, skills that translate well into all aspects of life.

Looking ahead, I aspire to build a career in web development, fueled by my passion for learning and a desire to solve real-world challenges through technology. I am motivated to continuously improve and contribute meaningfully to the industry.

I come from a supportive family that has always encouraged my ambitions, providing me with the strength and guidance necessary to pursue my goals. Their unwavering belief in me has been a driving force throughout my journey.
